

# Two (DL) CANDELS morphology catalogs

Marc Huertas-Company

E. Daddi, P. Pérez-González, **P. Dimauro**, M. Bernardi, F. Caro, D. Koo, S. Faber, J. Primack, G. Barro, D. Tuccillo, S. Mei, G. Snyder, J. Lotz, C. Lee, A. Dekel, S. Lapiner, B. Haussler et al.

I - “Visual” morphologies

# CANDELS visual classification tree

*Kartaltepe+14*

- Classification of galaxies in GOODS-S with  **$H < 24.5$** 
  - Each galaxy is classified by 3-5 experts
  - Fractions for ~8000 galaxy in GDS
- Classification done in F160 (+F125, F105)

# CONVNET for CANDELS

[Dieleman+15, MHC+15b]

- **TRAIN:** ~50.000 redundant galaxies in GDS (~10 days)
- **CLASSIFY:** GDN, COSMOS, UDS, GDS (~8h/field)

*Feature learning*

*Neural Network*

**INPUT:** RGB  
JPEG GDS  
snapshots

**OUTPUT:** 10  
probs.

# DEEP-LEARNING APPLIED TO MORPHOLOGY

# Catastrophic “errors”

$\text{fsph}_v > 0.7$  and  $\text{fsph}_a < 0.3$  or  $\text{fsph}_v < 0.3$  and  $\text{fsph}_a < 0.7$

$\sim 15/8000 = 0.2\%$

$\text{fsph} = 0.82 / 0.25$   
 $\text{fdisk} = 0.5 / 0.76$   
 $\text{firr} = 0.0 / 0.22$

$\text{fsph} = 0.8 / 0.25$   
 $\text{fdisk} = 0.75 / 0.95$   
 $\text{firr} = 0.0 / 0.0$

$\text{fsph} = 0.76 / 0.11$   
 $\text{fdisk} = 0.6 / 0.66$   
 $\text{firr} = 0.39 / 0.53$

**VISUAL / AUTO**

# Summary of catalog

- $\sim 50.000$  galaxies in 5 CANDELS fields (GDN, GDS, COSMOS, UDS, EGS)
- 10 probabilities (fractions for each galaxy)
- $H < 24.5$
- $\langle z \rangle = 1.25$
- Optical rest-frame morphology at  $1 < z < 3$
- Complete @  $M_{\text{star}} > 10^{10} M_{\text{sol}}$  @  $z \sim 3$

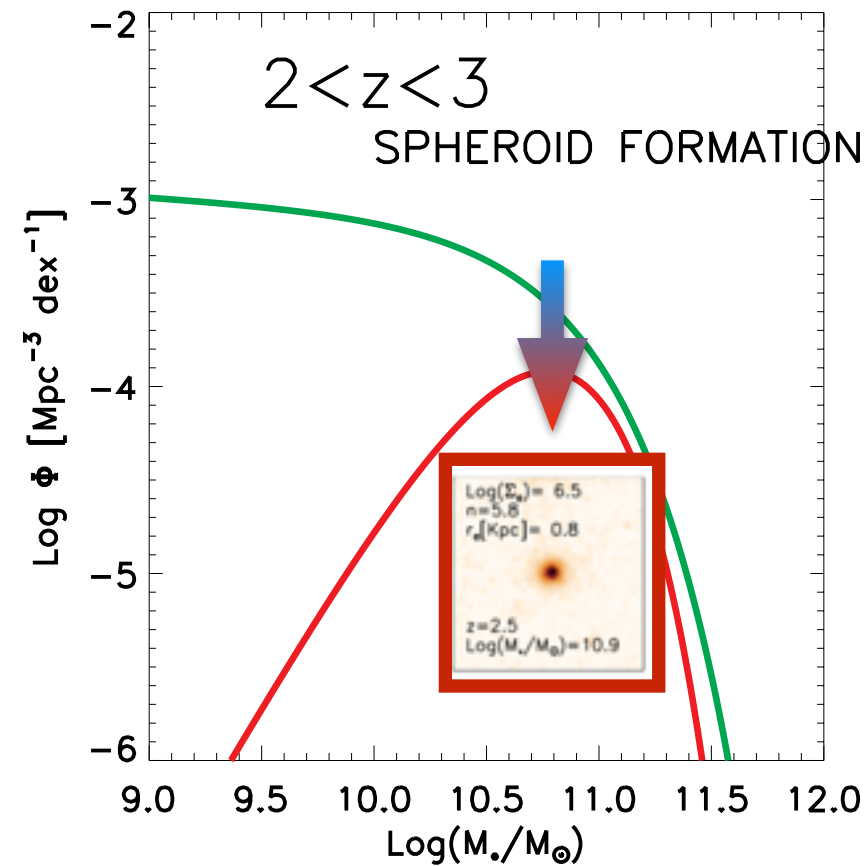

Available @  
Rainbow Database

Rainbow\\_navigator\\_public/](http://rainbowx.fis.ucm.es/Rainbow_navigator_public/)

## CORE SPHEROID FORMATION

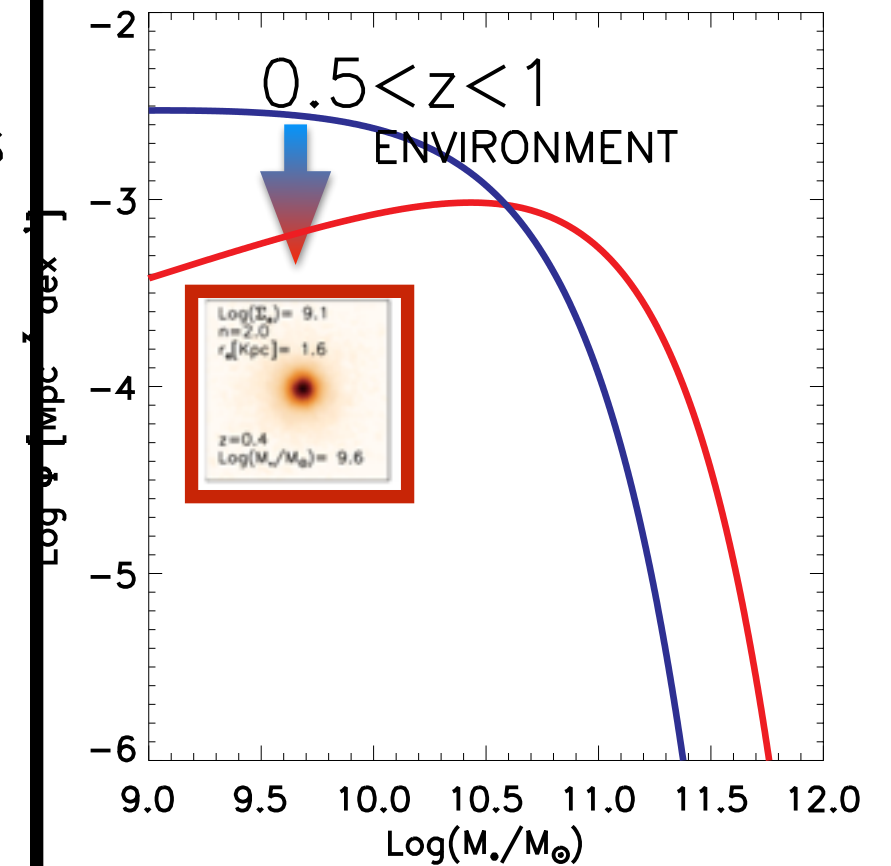

**Violent quenching:**  
Rapid spheroid formation  
Violent quenching  
Fast gas consumption  
Compact and dense remnant (Dekel+, Barro +13)

## EMERGENCE OF PASSIVE DISKS

**Gentle quenching:**  
Normal disks dominate (disk stabilization)  
“Quiet” quenching that preserves the disk - see Peng+15

## LOW MASS END: ENVIRONMENT

**Environment quenching** dominates at the low mass end  
Disks statistically destroyed - Ram-pressure?

# II - Bulges and disks

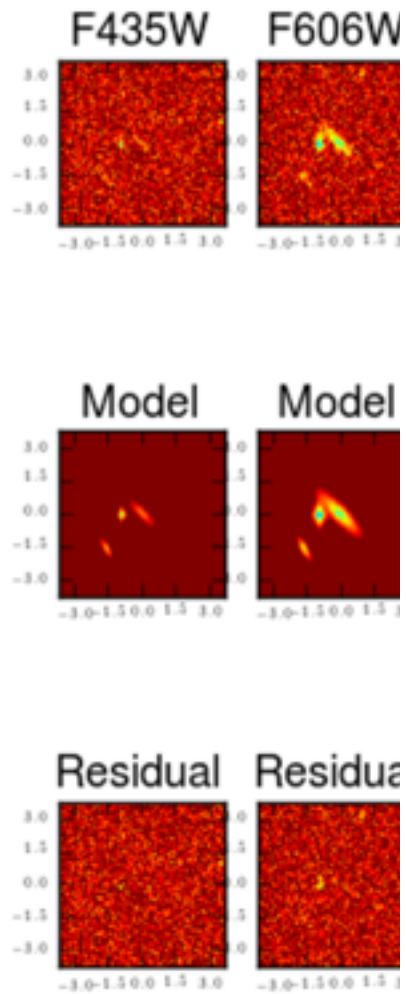

GALFITM catalogs  
in 7 -4 bands

Very similar to Boris' catalogs

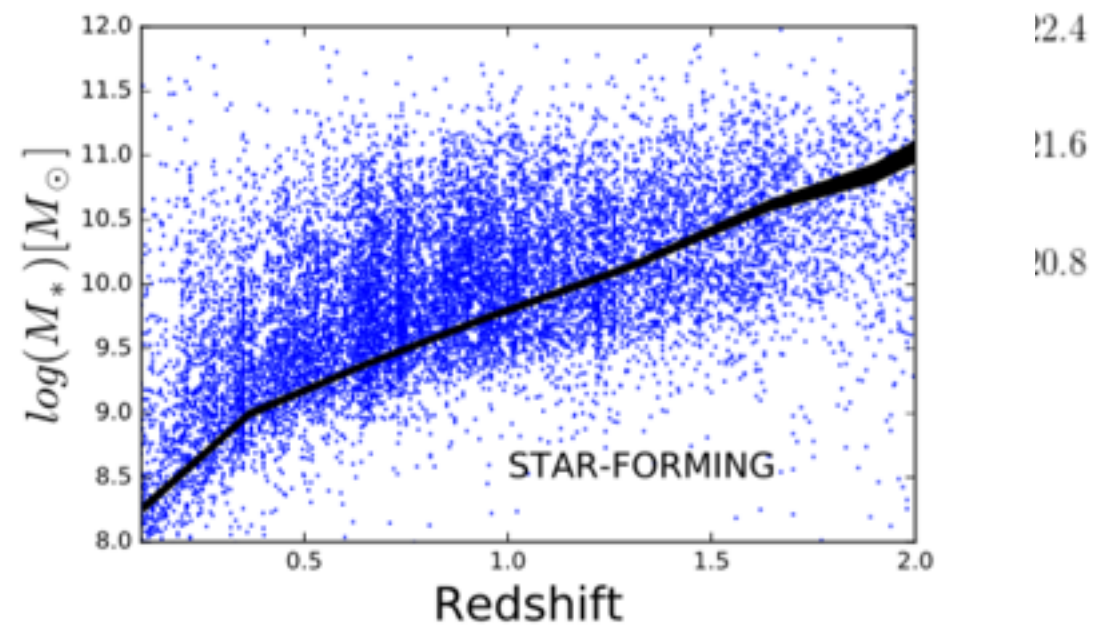

Dimauro, MHC+17a

# GALFITM catalogs in 7 -4 bands

$H < 23!$

Very similar to Boris' catalogs

17a

# MODEL SELECTION

1 component?

2 components?

# MODEL SELECTION WITH DL

## TRAINING:

simulations of analytic profiles with PSF, noise effects

(no limits on the size)

UNSUPERVISED  
FEATURE  
LEARNING  
MACHINE

2 component  
(B+D)

1 component disk

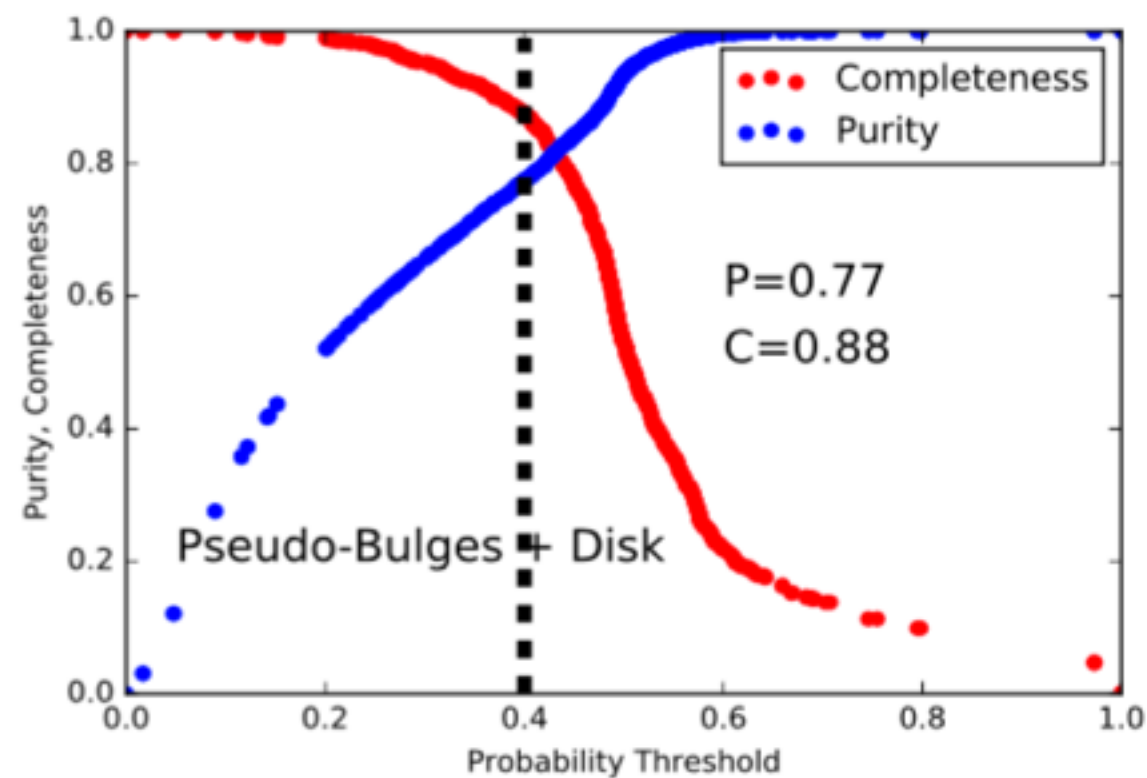

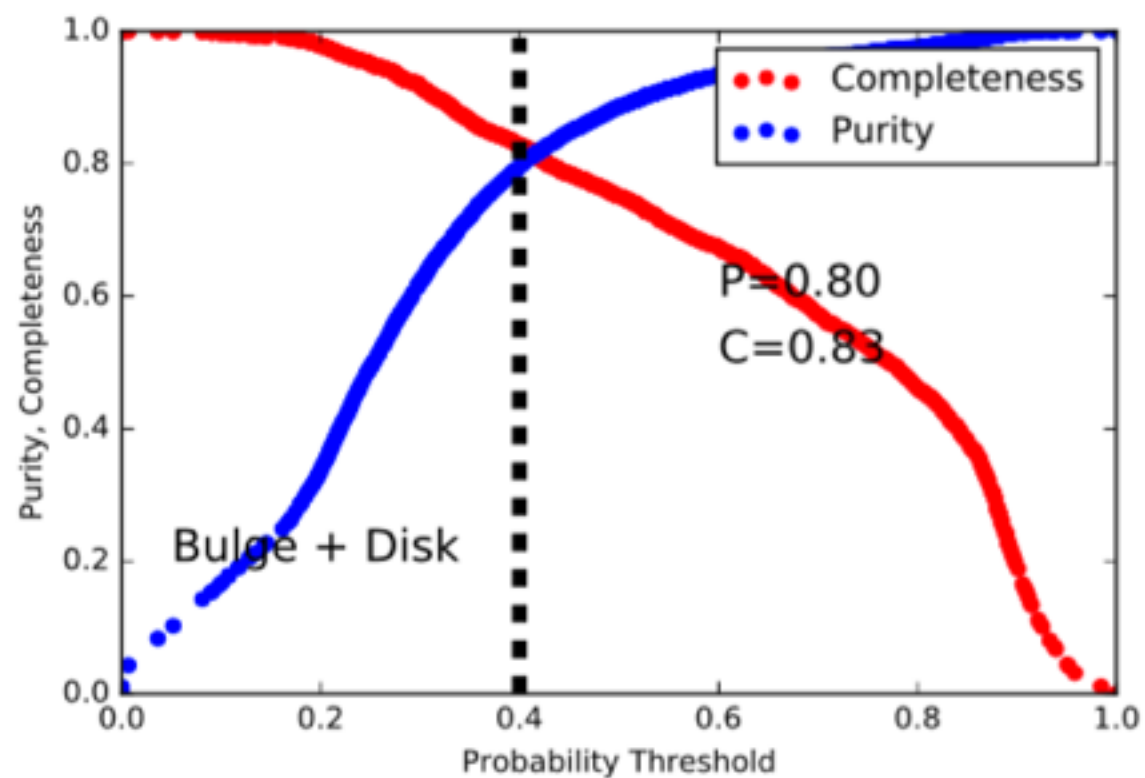

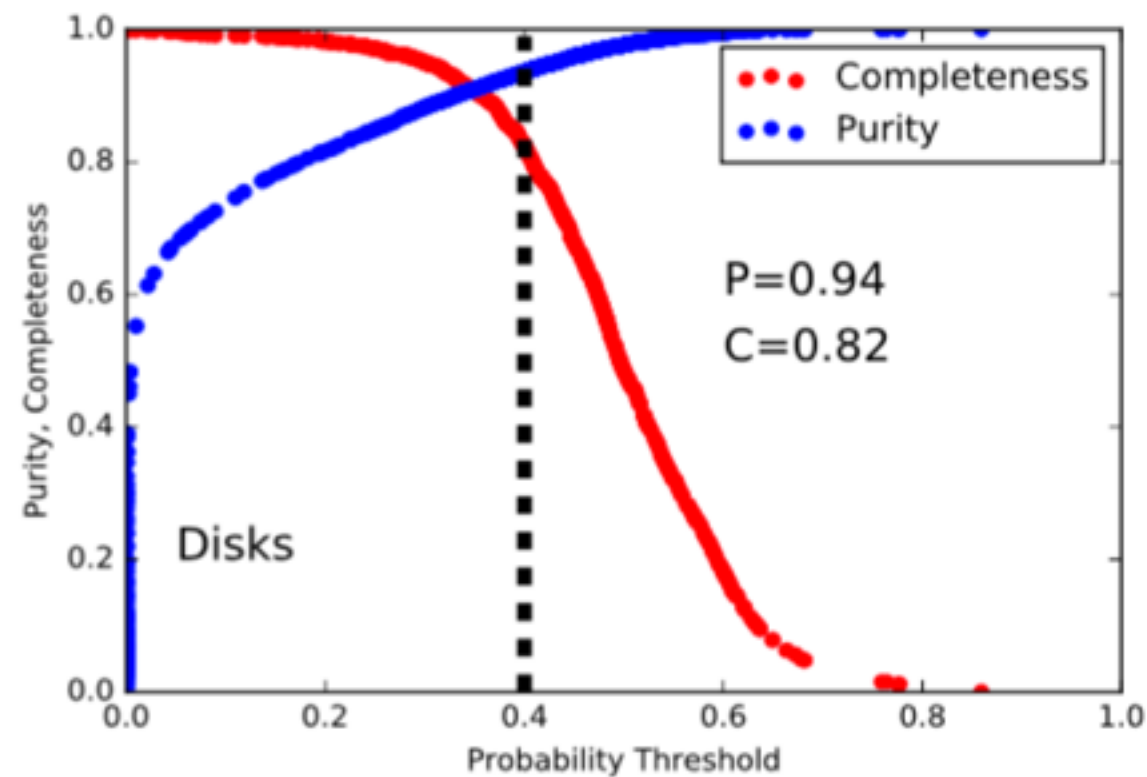

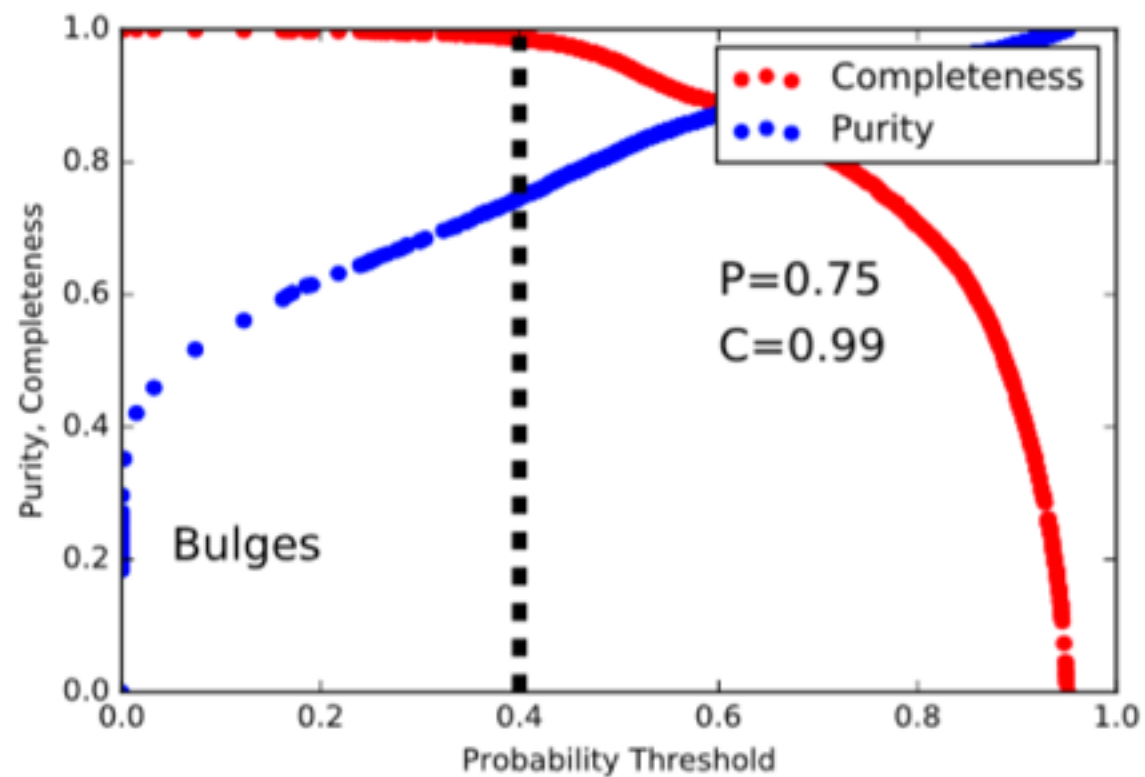

1 component bulge

2 component  
(PB+D)

## DATA:

HST deep field observations  
CANDELS

Pure  $n=1$  model 1-C

Pure  $n>2$  model 1-C

Sersic+Exp model ( $n>2$ )

Sersic+Exp model ( $n<2$ )

No model (6%)

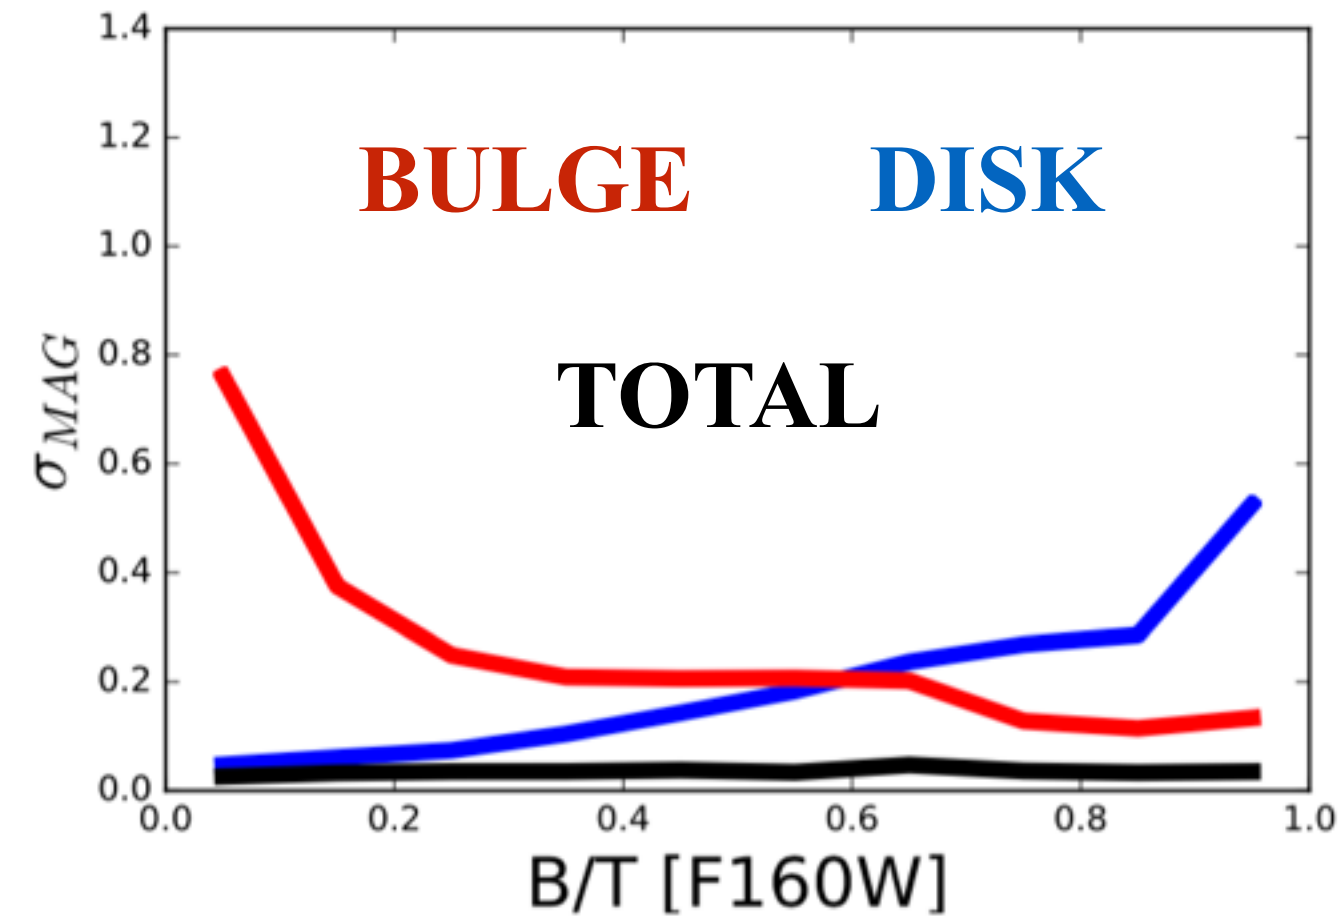

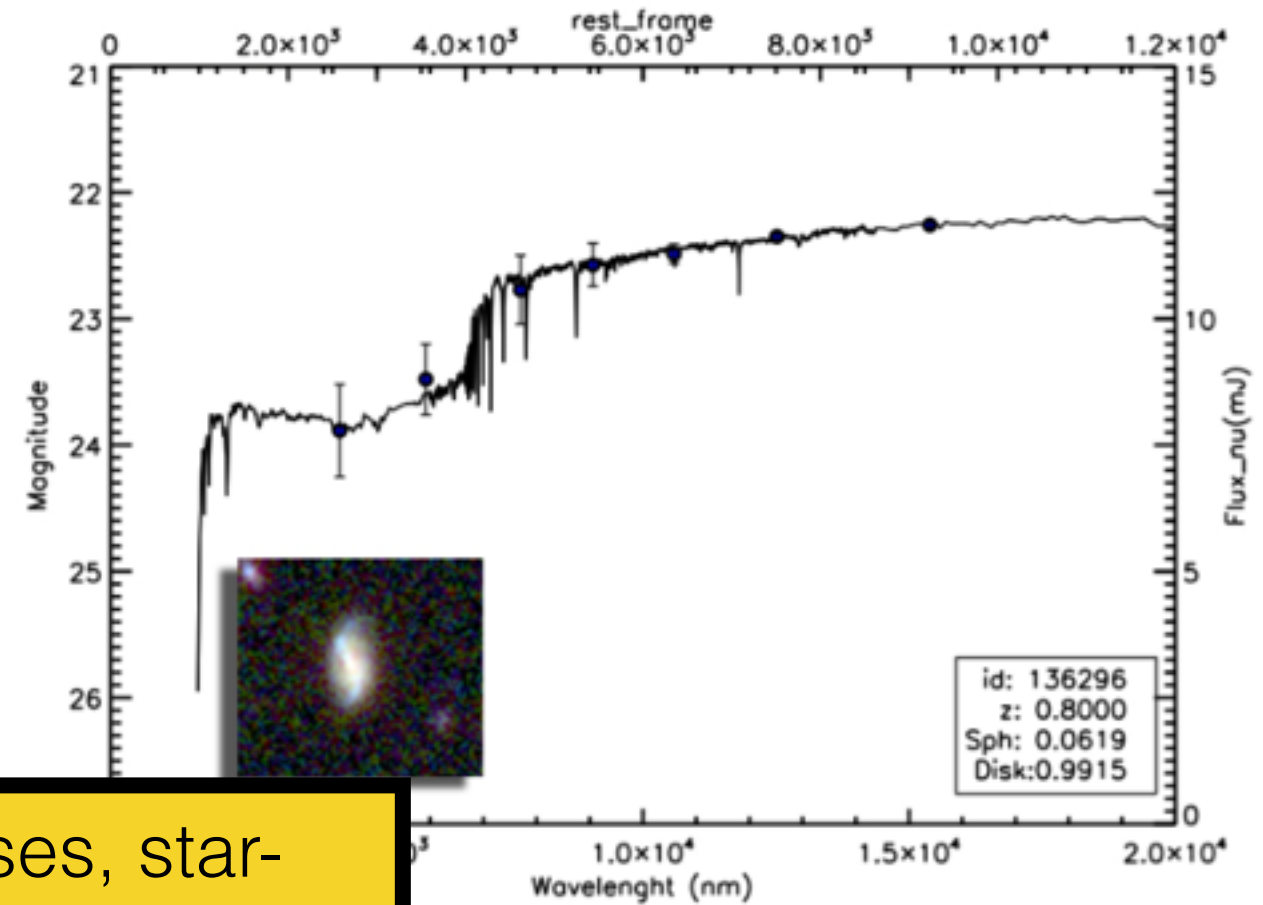

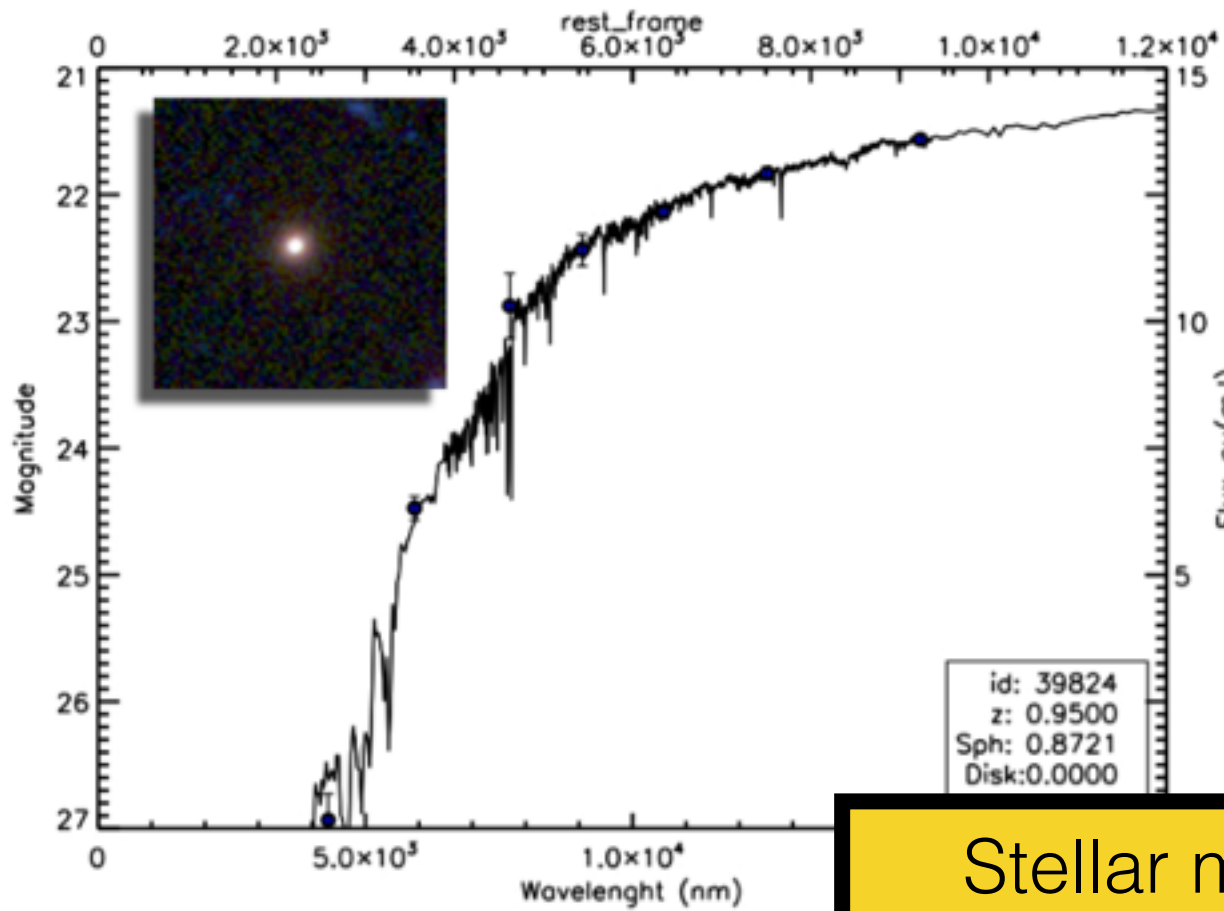

# INDIVIDUAL ERROR ESTIMATE

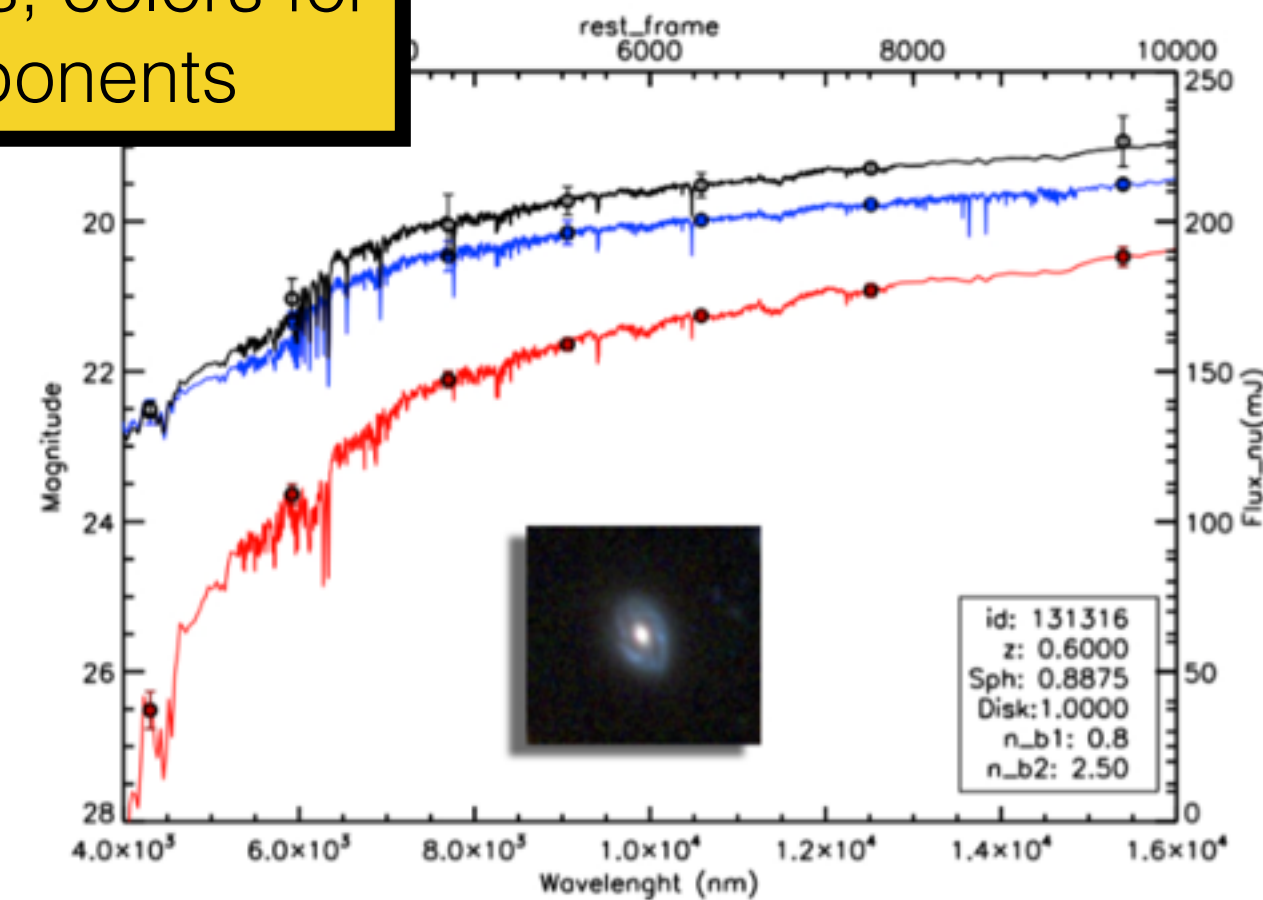

$$\mathbf{p}^{2C} = \left( \frac{m}{\sigma_m}, \frac{\log(n_b)}{\sigma_{\log(n_b)}}, \frac{\log(R_d)}{\sigma_{\log(R_d)}}, \frac{\log(R_e)}{\sigma_{\log(R_e)}}, \frac{BT}{\log(BT)}, f_{sph,disk,irr} \right)$$

(van der Wel+12)

Stellar masses, star-formation rates, colors for both components

# Summary of catalog

- Service and Sersic+Exp in 5 fields, 4-7 bands - 0.06"/pixel
- ~ 17.000 galaxies,  $H < 23$ ,  $z < 2$ , **3 different setups**
- **Probability of “best” model using deep-learning**
- **Individual error estimates on the different structural parameters**
- **Stellar population properties of bulges and disks (Mstar, SFRs, UVJ...)**
