

## **HOMEWORK 6**

Due Thursday, May 14th

Do the following problems in Bennett:

Chapter 9: 53, 61

Chapter 10: 60

## **PROJECT HOMEWORK**

Due Thursday, May 14th

*Each group member* send an email to Claire ([max@ucolick.org](mailto:max@ucolick.org)) and Stefano ([smeschia@ucolick.org](mailto:smeschia@ucolick.org)) covering the following points:

- Write the questions that you will personally be working on.
- Find at least 4 books and 4 articles references. The articles might come from scientific magazines (e.g. Scientific American, Sky & Telescopes, New Scientist, etc.) or journals (e.g. Nature, Science, Icarus, Astrobiology, Geophysical Research letters, Journal of Geophysical Research). Web-only resources should be used to facilitate the discovery of scholarly resources, but will not count as references. If you cannot find relevant papers, please send us an email and we will suggest some resources and papers that you might find useful.
- For each book and article, specify how you will use of the resource to answer one of the questions.

Include your other group members in your email so that they are aware of what you are working on and what resources you intend to use. Please make sure to spell-check your document.
