So, you don't know much about Sybase and you never saw wisql before.
And you're wondering what to do with this window that just popped up.

Well, the way to use wisql is basically this:

FIRST: select a database from the Databases menu.

SECOND: select a table using the Choose Table tool.

THIRD: decide whether you are going to type in SQL commands in the Query window (the upper large window) or to use the EZtools.

FOURTH: do things with SQL, or use the EZtools, and possibly get some results that you like in the Results window.

FIFTH: you can then Save or Print these results, and you can Save your Query if you wish, so that you can use it again.

There are lots of cool things you can do with this tool, but this is the basic pattern of 'how to work with it.' Play with the buttons and menus, and don't
