

Manual Shutter Closure

1. Locate the shutter control box on the 3rd level.

2. **Switch** into **manual** mode.
3. Each shutter, front and rear, has a forward and backward button.
4. Place front shutter past closed position, seen in pic below.
5. Run rear shutter forward until it is at closed position.
6. Bring front shutter in contact with rear shutter.
7. Return to **auto** mode.

Shutters in the closed position.
Photo is taken from the controller
itself, looking up at the dome
shutter. The tubes across the top
are the telescope trusses.
The shutters should meet at the
line in the arch.
